DETECTION AND RESPONSE GAME

INITIAL ACCESS

SPEARPHISHING

The hacker sends an email to employees pretending to be the managing director and asking for sensitive data.

PREVENTION
Anti-impersonation technology

DETECTION
Check the sender & domain

URL PHISHING

The hacker sends emails to all employees containing a malicious URL to a website that executes crypto jacking scripts.

PREVENTION
Restrict web-based Content

DETECTION
Email sandbox

ATTACHMENT PHISHING

The hacker sends emails to all employees containing a malicious Microsoft Office document which executes scripts to collect user and environment data.

PREVENTION
Disable MS Office macros

DETECTION
Email sandbox

VALID ACCOUNT VPN

The hacker discovered a valid VPN account for your network during a data breach that you don't know about.

PREVENTION
Store credentials securely

DETECTION
Monitor sites like haveibeenpwned.com for your data

USB RUBBER DUCKY

The hacker was left alone at the reception for a short time and had the opportunity to connect a Rubber Ducky which steals saved passwords from the browser.

PREVENTION
Blocking USB

DETECTION
Keystroke speed

TRUSTED RELATIONSHIP

The hacker hacked another company that has a trusted active directory relationship with your network.

PREVENTION
Network segmentation

DETECTION
Monitoring for activity conducted by trusted entities

SQL INJECTION

The hacker finds an SQL injection on a website that is used for applications at your company, with which he can execute commands on the server.

PREVENTION
Sanitize input

DETECTION
Extended events and SQL monitor

WATERING HOLE ATTACK

The hacker has infected a website that he knows that employees in your company use regularly to obtain credentials.

PREVENTION
Two-factor authentication

DETECTION
Splunk User Behaviour Analytics
